

Update M9

The edited proposal is in the repository under my folder. There is a folder titled *Proposal* (forgive the capital P, it won't seem to allow me to rename it!) which holds *proposalM9.pdf*.

I have been focusing on acclimating myself with VPython. I have looked through a few of the example programs (especially bounce and other particle physics simulations) and have learned the functions and whatnot in them.

This upcoming week, I will be finishing up learning the basics of VPython and I will start building the physical set-up of the double slit experiment. I have to look at vpython.org to learn how to draw the fringes with varying brightness (resembling difference in intensity).

On another note, I also need to start learning LaTeX so I can make more professional-looking submissions.
